Summary: Front end developer position leveraging background experience running a business to provide great teamwork skills and taking the initiative to create innovative websites.
Worked on a project using github with an agile process method to create a website with web API's. Skills include: planning efficiently, task monitoring, communication and teamwork. Obtained a certificate in Full Stack Web Development from University of Toronto Coding Bootcamp.

Skills: HTML5, CSS3, Bootstrap, JS ES6, Github, Express, Nodejs, jQuery, Handlebars

Projects

Off the couch project using CSS, JavaScript, Web API's, bootstrap and css libraries. Created an application where a user can select from a list or have a random nearby activity generated for them to do. Can also select to have a random nearby restaurant option generated. https://github.com/MpAlfano/Off-the-couch-personal

JavaScript quiz using Javascript and CSS. Created an application where a user can take the quiz answering questions and gaining points for correct answers and then saving highscores.

Work day scheduler using JavaScript, CSS, bootstrap and moment.js. Created an application to allow the user to save work tasks for the day. Tasks are saved for when the user returns to the page they will load. Task areas will have their color change depending on the time of the day and if the task has passed or is still to come.
